# PROPOLIS PROPERTIES

Poplar buds

To produce propolis, bees collect resins on buds and barks of certain plants.

Bees use propolis to build, repair, and strengthen the hive. They seal openings with it, forming a barrier against pathogens thanks to antimicrobial properties.

## Identified compound

Content in g / 100 g of Propolis Oléoactif® TL  
- based on variability of raw materials -

Total triglycerides	83-85
Total unsaponifiables	3-5
Free fatty acids	6-8
Total phenols ( <i>in oleuropein equivalent</i> )	2-6
Water and volatile compounds	< 0.5

Quercetin, naringenin, caffeic acid and galangin, are molecules that give to propolis its antioxidant and antimicrobial properties

*Average yield of phenolic extraction  
of these 5 compounds : 64%*

\*Galangin quantity is provided in chrysin equivalent

# SCAVENGER OF FREE RADICALS

The ORAC value of Propolis Oléoactif® TL is 1 555 times higher than sunflower oil value, naturally rich in vitamin E

This brings a protection from free radicals aggressions, the major cause of skin aging
